Commonly Used Abbreviations and Acronyms

For a full list, as well as a listing of the relevant statues for each legal commitment, please see the glossary at the end of this report.

ABBREVIATION	DESCRIPTION
A2	Patient physical assault committed by another patient. Defined as “Aggressive Act to Another Patient - Physical: Hitting, pushing, kicking or similar acts directed against another individual to cause potential or actual injury.” This does not include verbal assault, which is coded as “A1.”
A4	Staff physical assault committed by a patient. Defined as “Aggressive Act to Staff - Physical: Hitting, pushing, kicking, or similar acts directed against a staff person that could cause potential or actual injury.” This does not include verbal assault, which is coded as “A3.”
A2+A4 Combined	Combined Patient physical (A2) and Staff physical (A4) assaults.
DSH	Department of State Hospitals
DJJ	Department of Juvenile Justice
IST	Incompetent to Stand Trial (PCI370)
LPS	Lanternman-Petris-Short
MDO	Mentally Disordered Offender
MDSO	Mentally Disordered Sex Offender
NGRI	Not Guilty by Reason of Insanity
PC2684	Mentally Ill Prisoner (PC2684)
SVP	Sexually Violent Predator

Section I: Executive Summary

During 2017, the Department of State Hospital's (DSH) five freestanding hospitals experienced another increase in patients admitted and treated, again due in large part by the increase in IST admissions. Overall, the total number of patients treated at any point in time during calendar 2017 totaled 10,499; this represents a 3.1% increase over the number of patients treated in 2016, and a 18.3% increase in patients treated in a year since 2010.

As with previous years, most patients treated in 2017 were not violent during this period (shown in green in Figure I.1, about 77.1% of all patients treated). Of the remaining patients treated, about 22.9%, committed an act of physical violence in 2017 while hospitalized, either against another patient or a staff member. Of the violent patients, a very small number had 10 or more violent acts during 2017 (designated as "repeatedly violent patients"). While numbering only 151 patients total during 2017, these repeatedly violent patients were responsible for 38.9% of all the assaults on both patients and staff during 2017.

In [Section II.1](#), this report presents the violence totals and then integrates these totals with the patient census data to provide information about violence using standardized units of violence rates per 1000 patient days. In 2017, DSH implemented the new Cal/OSHA Workplace Violence Prevention in Health Care standards (California Code of Regulations, Title 8, Section 3342), which included new mandatory reporting requirements for violent incidents against staff. It is unclear if these new reporting requirements contributed to changes in violence rates during this period.

The remainder of this summary will provide an overview of DSH violence data and presents information on current patient violence trends, while also comparing this information with previous data. The body of this report will present aggregate information on patient aggressors and victims as well as examine the severity of assault injuries for the patients. This report also begins to examine the influence of admission rates on violence. Additionally, this report will look more in-depth at the repeatedly violent patients and the disproportionate number of violent incidents due to them, details that are presented in [Section II.5](#) of this report. The report then presents data on the monthly rates of violence, looking at monthly rates by patient commitment, hospital, and then (in the appendices) by hospital and patient legal commitment.

- ▶▶ *In 2017, DSH treated 3.1% more patients than the previous year.*
- ▶▶ *Since 2010, DSH has seen a 18.3% increase in the unique number of patients treated.*
- ▶▶ *In 2017, the rate of patient-on-patient assault decreased 2.8% from the year prior.*
- ▶▶ *In 2017, the overall rate of patient-on-staff assault increased 14.9% from the year prior. The rate of assault where contact was made increased 6.9% while the rate where contact was attempted increased 25.3%.*
- ▶▶ *1.4% of patients were responsible for 38.9% of all aggressive acts in 2017.*
- ▶▶ *There continues to be a decrease in the number of violent incidents that result in the need for medical treatment or outside hospitalization.*

Figure I.1
2017 DSH Patients and Aggressors, 1 Square = 1 Patient

- ▶▶ *22.9% of the 10,499 patients treated have committed at least one violent act during their stay in DSH.*
- ▶▶ *A total of 151 patients had 10 or more acts of aggression in 2017.*
- ▶▶ *Most violent incidents occur within 120 days of a patient's admission.*
- ▶▶ *New admissions have their first violent act very soon after admission; most occur within 35 days of admission*

Analysis of the 2017 data shows that compared to the previous year:

- There was a 3.1% increase in the unique number of patients treated, and a 0.6% increase in population measured in total patient days;
- DSH-wide, the rate of patient-on-patient assaults decreased by 2.8% and the overall rate of patient-on-staff assault increased by 14.9%. Using the data available since 2016, which classified staff assaults into “Contact Made” and “Contact Attempted” but not made, the largest increase was in the “Contact Attempted” category, which increased by the rate of 25.3%, while staff assaults classified as “Contact Made” increased by 6.9%, see [Section II.B](#) and [Section II.C](#) for further data and details;
- Changes in violence rates were not uniform, however, and some variation was noted across legal classes and hospitals (see [Sections II.2](#) and the [Appendices](#) as well as [Section III.2](#) for further details);
- With the increase in population, the percentage of individual (unique) patients committing aggressive acts was slightly lower at 22.9% in 2017, compared to 23.2% in 2016 (in 2017, 2400 patients of the 10,499 treated committed a violent act, while in 2016, 2,359 of the 10,186 committed a violent act; for further information see [Section II.2](#));
- There were continued reductions in the more serious levels of patient victim injuries from assault from last year's rates, (see [Section II.4](#));
- There was a decrease from 156 down to 151 in the number of repeatedly violent patients who committed 10 or more assaults in 2017; (see [Section II.5](#));
- For newly admitted patients, the first violent act occurred within 35 days of admission to the hospital. This means it is important to consider the rate of new admissions to the hospitals and examine the impact of increased admissions on all violence types at the hospitals. See [Section II.1. D](#) for further discussion of the influence of admission rates on violence.
- Patients who are violent in DSH are hospitalized longer, specifically, the median length of stay for a violent patient is almost five times longer than the length of stay for a non-violent patient. These longer periods of hospitalization for the most violent patients has the consequence of increasing the percentage of violent patients (see [Section II.1. E](#))

At the end of this report, supplementary data tables to provide additional detailed information are presented in the [Appendices](#), as well as a [Glossary](#) of terms used in this report.

Section II: Overview of Violence Data

I. Yearly Summary of Patient-on-Patient and Patient-on-staff Assaults in DSH

A. Population Increases at DSH

Because the DSH population directly impacts the computation of violence rates, this information is foundational to calculating and understanding violence rates presented in this report. Thus, it is presented first in this section.

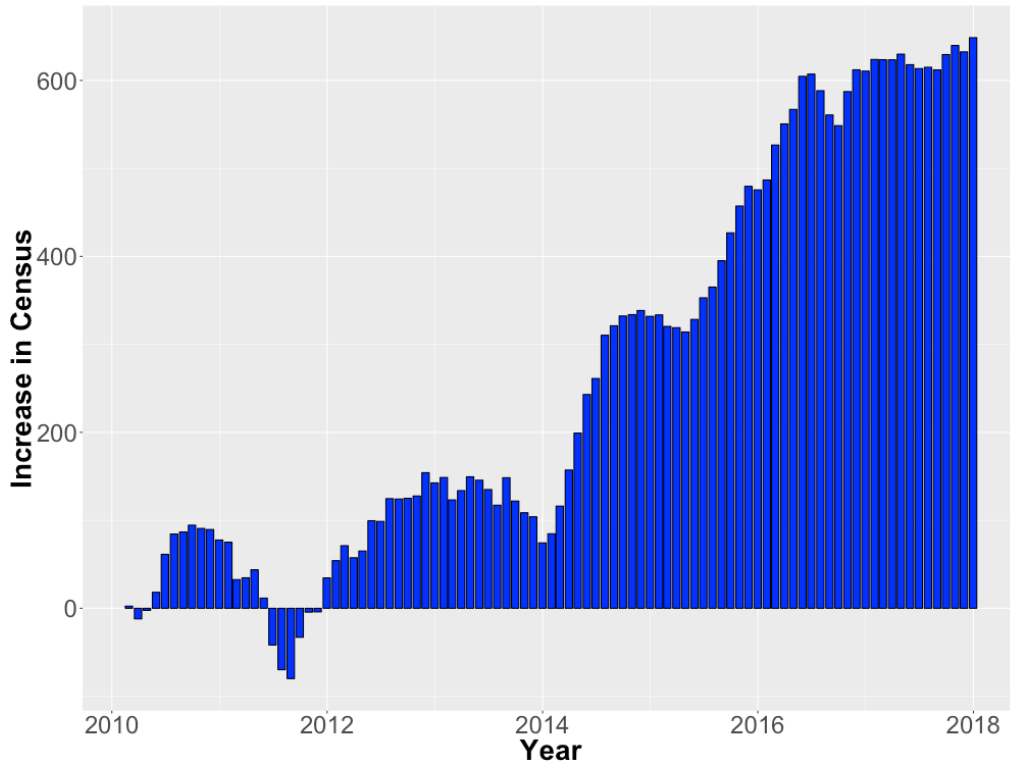

The total number of patients treated at any point during the year in DSH hospitals has been steadily increasing over time.

Figure II.1
DSH Hospitals Total Patients Treated, by Year

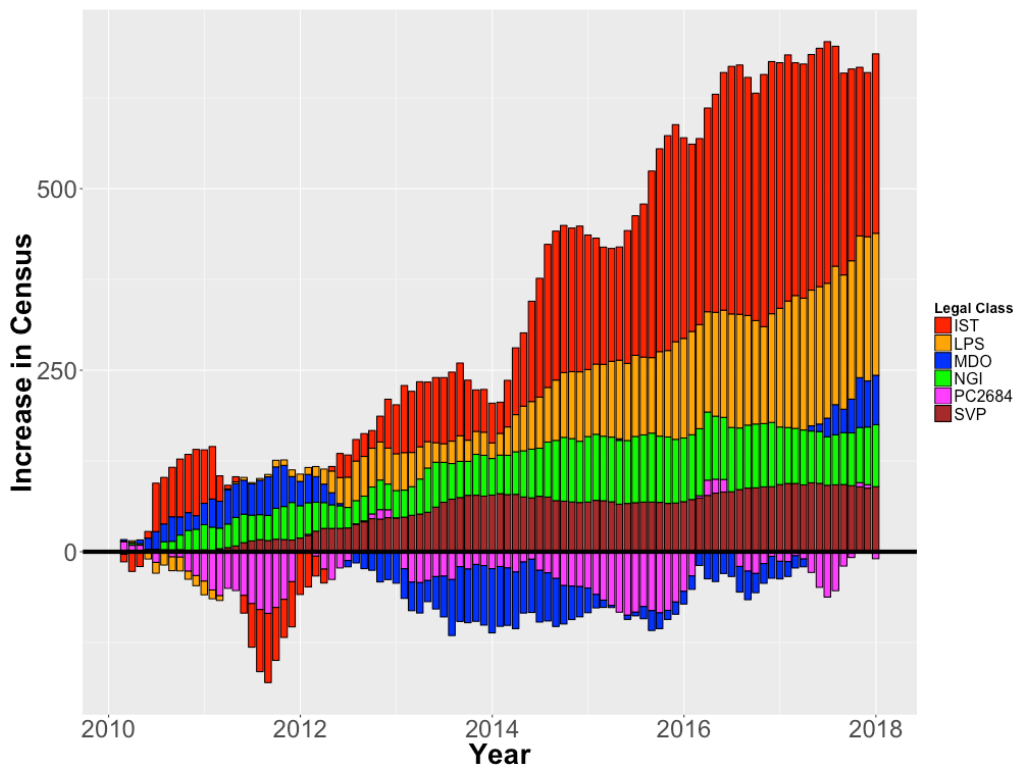

Similarly, the total number of patients residing in the hospital at any one time (tracked as the DSH “Average Daily Census”) has also been increasing over time. The below graph shows the increase in Average Daily Census (ADC) at all five DSH hospitals, using the census on January 1, 2010 as the baseline.

Figure II.2
Change in Hospital Average Daily Census

It is important to note that the changes in population have not been uniform across all the legal classes. The greatest population increases have been in the Incompetent to Stand Trial (IST) and Lanternman-Petris-Short (LPS) patient classes (see the glossary for a full description of these and all other legal classes). These two groups of patients are known to have some of the highest rates of assault, when compared to other patient groups (this will be discussed later in this report).

Figure II.3
Net Change in Census by Legal Class

When analyzing violence over time, this underlying change in population means that using accurate comparisons across years will not be possible using yearly violence counts or totals. For this reason, this report will emphasize reporting violence using rates per 1,000 patient days. To better understand this concept (using a purely hypothetical example), one can easily understand that having 1,000 patient-on-patient assaults when the population totals 1,000 patients is not equivalent to having 1,000 patient-on-patient assaults when the population is 2,000. Although the violence counts in our hypothetical example are the equal (both 1000), the underlying population totals are different. Stated simply, the number of assaults does not take into account the change in the patient population.

Patient-on-patient assaults are defined in DSH as “Aggressive Act to Another Patient - Physical: Hitting, pushing, kicking or similar acts directed against another individual to cause potential or actual injury,” and DSH staff use the code “A2” to report such an assault, hence the use of the

abbreviation in this report (an analogous definition is used for patient-on-staff assault, which is coded by staff as “A4.”)

B. Rates of Patient-on-Patient and Patient-on-staff Assaults per Year

- ▶▶ In 2017, the rate of patient-on-patient assault decreased 2.8% from the year prior.
- ▶▶ In 2017, the overall rate of patient-on-staff assault increased 14.9% from the year prior. The rate of staff assault where contact was made increased 6.9% while the rate where contact was attempted increased 25.3%.

As seen in the figure below of counts, the number of patient assaults on other patients (A2 patient-on-patient assaults) decreased in 2017, while the number of patient assaults against staff increased (A4 patient-on-staff assaults). (Note: data for 2010 understate that year’s true total, as one hospital did not begin tracking and reporting until February 2010; these numbers omit the January 2010 for that one hospital).

Figure II.4
DSH Wide Count of Incidents, by Year

Note: Figure II.4 shows counts (not rates) of aggressive incidents against both patients (A2) and against staff (A4). These data include January 2010 data, see the paragraph above for a detailed explanation.

Since these totals do not take into account the increase in patient census, simple totals of violence per month or per year should not be used for analysis. The better measure of violence would be a rate measure.

Definitive conclusions about increases or decreases in violence can only reliably be drawn by analysis of the rate of violent incidents. As noted in previous reports, DSH violence rates historically were reported in terms of “Monthly Totals,” which is a measurement that fluctuates depending on the days of the month. Additionally, it does not take into account changes in patient census, which also impacts the amount of violent incidents in a month. A rate measure, such as number of assaults per 1000 patient days, offers a more precise way of measuring violence, to better inform leadership and strategies to reduce violence.

For these reasons this report will focus on “Violence Rates” and give this rate as a number per 1000 patient days. This number is easily interpreted and enables more accurate comparisons across time.

Figure II.5
DSH Wide Rate of Assaultive Incidents, by Year

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began

coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.I.B](#) for further details.

There are obvious similarities between the figures showing the barplots of violence counts and violence rates. As discussed previously, however, while monthly or yearly “Totals” are a simple and convenient measure, counts and totals are potentially very misleading as only the rate of patient violence takes into account both the impact of changes in the patient census and fluctuating days in the month on violence totals.

C. Changes in Patient-on-staff Assault Definition and Data Collection Procedures

In February 2015, all DSH hospital Standards & Compliance Directors attended a department-wide data standardization meeting. The purpose of this meeting was to ensure uniform data definitions and collection procedures. After a hospital-by-hospital review of definitions and data collection procedures, it was discovered that DSH-Atascadero was defining patient-on-staff violence (A4) differently than the other four hospitals. DSH-Atascadero was only coding an event as an A4 incident when a patient made physical contact with a staff member, whereas the other four hospitals were coding an event as an A4 incident when physical contact with a staff member was made **or** when physical contact was **attempted** by the patient but not actually made.

During that same meeting, a uniform definition of patient-on-staff violence was determined; this uniform definition included incidents both when physical contact was made **or** when contact was **attempted** but not actually made.

In order to move forward with this definition, but still capture the data in a manner that DSH-Atascadero had used previously, it was also decided to incorporate a change in data collection procedures, so that patient-on-staff violence would be further categorized into acts in which contact was made and acts in which contact was attempted, but not actually made.

The effective date for these changes to A4 definitions and data collection procedures was January 1, 2016.

The reader should note that 2016 data contained within figures in this report utilized the revised definition described in this section. As a result, the 2016 data from DSH-Atascadero often shows an increase in the rates of patient-on-staff violence.

Furthermore, this change in coding now allows DSH to distinguish between violent incidents where a patient actually physically hit a staff or not. The counts and rates for this information on staff assaults starting with 2016 is presented in the next two figures.

Additionally, at this same meeting, a new category of staff assault was added, “A8 – Sexual Assault Against Staff.” Because this is coded exactly the same as A4 Physical Assault Against Staff, in regards to contact made/contact attempted, and because the overall numbers are very low (48 in 2016 and 61 in 2017, about 1.7% of the overall A4 Staff Assault total in both years)) these were combined with the A4 Staff Assault incidents and reported as part of that category).

The violence totals by patients against other patients or against staff also do not include reported incidents of physical assault to family or other visitors that occur in DSH facilities. In 2016, eight such incidents were reported and in 2017, nine such incidents were reported.

Again, all data presented in this report is reported physical violence, where contact was either made or attempted. No incidents of verbal threats or abuse were reported.

Figure II.6
DSH Wide Count of Staff Assaults – Contact Made and Contact Attempted

Note: Rates may not add up consistently due to rounding. Also, in 2016 63 staff assaults carried no information in the “Physical Contact” field (55 in 2017) so these incidents could not be included in the analysis and breakdown of this Physical Contact – Made or Attempted.

Again, because counts are not an adequate method for tracking violence and comparing over time, the rates per 1000 patient days are presented in the next figure.

In 2017, DSH implemented the new Cal/OSHA’s new Workplace Violence Prevention in Health Care standards (California Code of Regulations, Title 8, Section 3342), which included new mandatory reporting requirements to report violent incidents against staff to Cal/OSHA beginning in July 2017. It is unclear if these new reporting requirements may have had an impact on the staff violence data in this report.

Figure II.7
DSH Wide Rate of Contact Made and Contact Attempted for Staff Assaults

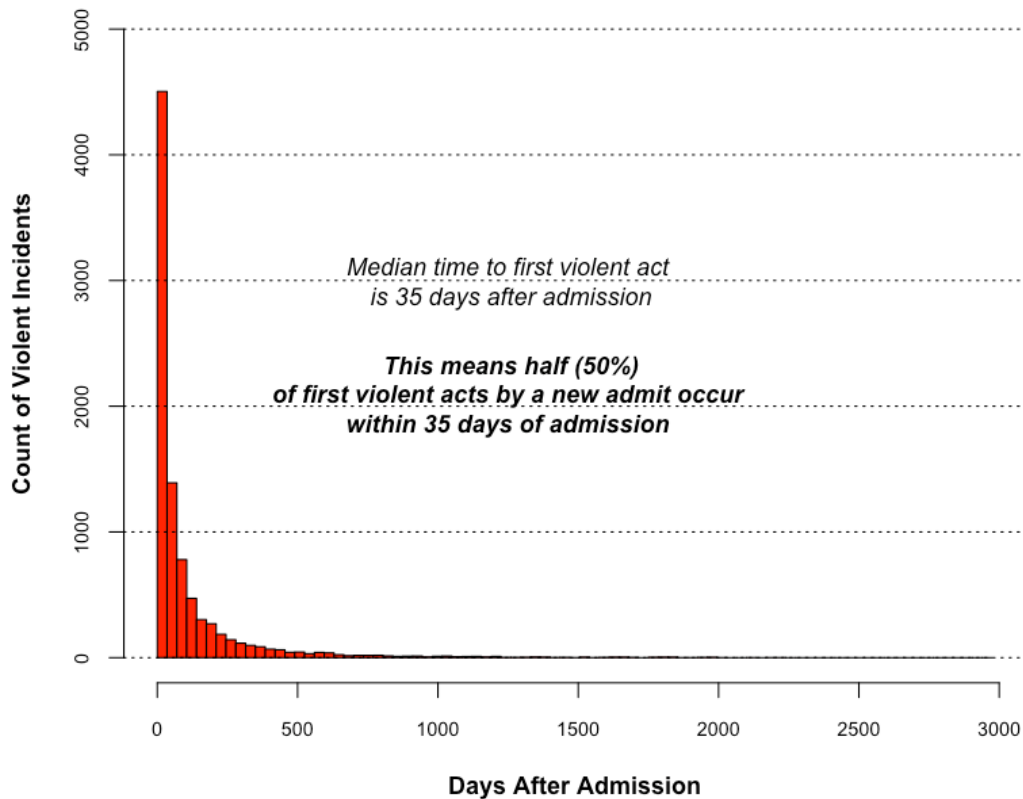

Note: Rates may not add up consistently due to rounding. Also, in 2016, 63 staff assaults carried no information in the "Physical Contact" field (similarly, 55 in 2017 carried no information) so these incidents could not be included in the analysis

D. Admission to a State Hospital is a Time of Increased Risk for Violence

Admission to a new hospital is a known risk period for dangerous, mentally ill patients, such as the forensic patients referred to DSH by the court system or the prisons. Research has shown this to be a period of higher stress as a patient acclimates to new surroundings and new social circumstances, different rules, etc. Especially for patients who are not stabilized on treatment medications (such as many new IST patients), this means that they may be more likely to exhibit violent behavior soon after admission.

Figure II.8
DSH New Admissions 2010-2017: When Violent Acts Occur –
Days to First Violent Act After Admission

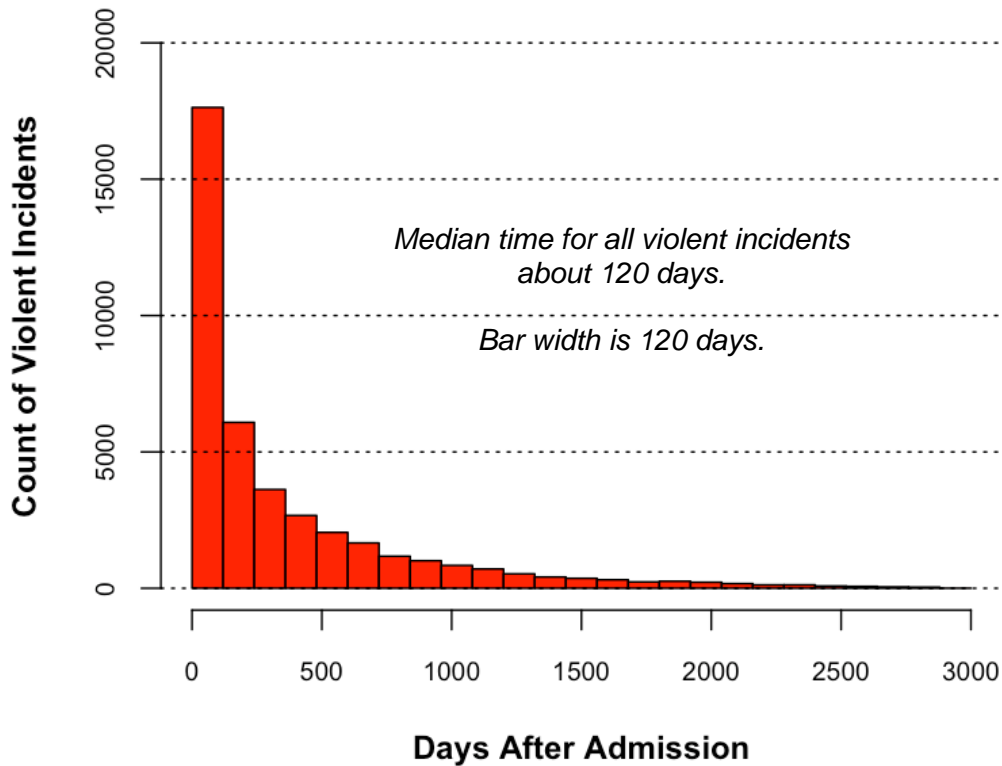

Note: the bars in this figure are 35 days wide, so the first bar shows the total number of violent acts during days 1-35, the second bar shows the total number of violent acts during days 36-70, etc.

Figure II.8 shows when the first violent act by new admits (since 2010) occurs. It is clear that the first violent act occurs soon after admission. In fact, when all violent acts are reviewed (and not just the first act) most violent acts by newly admitted patients occur within about 120 days after

admission. This leaves very little margin for treatment teams to assess, plan and initiate treatments to reduce violence risk.

Figure II.9
DSH New Admissions 2010-2017: When Violent Acts Occur –
All Violent Acts - Days After Admission

As can be seen by Figure II.9, the time immediately after admission is a critical time for each patient and the staff treating them. In terms of violence, this is the time the patient is most at risk of committing a violent act. Similarly, this is also the time that other patients and staff are most at risk for getting assaulted by a patient. At the same time, this is also when DSH clinicians must start actively treating these patients, often without necessary background and historical information that could be useful in reducing mental illness symptoms and violence in these patients.

E. Violent Patients Typically Have Repeated Episodes of Violence

As was mentioned briefly in the Executive Summary (and will be detailed later in this report), most patients are not violent during the course of their hospitalization. However, patients who are violent while hospitalized often have multiple episodes of violence while hospitalized, occurring soon after the previous violent episode.

Examining the data on patients with violent incidents, Table II.1 shows that during the most recent full calendar year (2017), while most patients treated were not violent, once a patient had one violent incident, there was a very high likelihood that that patient would continue to have subsequent violent incidents.

Table II.1
Percentage of Patients with a Certain Number of Violent Acts Having a Subsequent Violent Act

VIOLENT ACTS	PATIENTS	% COMMITTING ANOTHER ACT
0	8099	-
1 or more	2400	-
2 or more	1249	1249 / 2400 = 52.0%
3 or more	770	770 / 1249 = 61.6%
4 or more	540	540 / 770 = 70.1%
5 or more	413	413 / 540 = 76.5%
6 or more	334	334 / 413 = 80.9%
7 or more	281	281 / 334 = 84.1%
8 or more	223	223 / 281 = 79.4%
9 or more	182	182 / 223 = 81.6%
10 or more	151	151 / 182 = 83.0%

F. Violent Patients Have a Longer Length of Stay

Many patients in DSH are rapidly treated and discharged back to their community/referral source. However, when a patient is violent in DSH, they are typically hospitalized longer.

During 2010-2017, for patients admitted and discharged during this time period, the median length of days hospitalized for a patient who exhibited violence while in a DSH hospital was substantially longer than the length of stay for a non-violent patient. In fact, the median length of hospitalization for a patient with 10 or more violent acts was almost five times that of a patient with no violent acts.

Table II.2
Median Length of Hospitalization (In Days) for Patients in 2017, All Legal Classes

NUMBER OF VIOLENT ACTS	MEDIAN HOSPITALIZATION (DAYS)
None	111
One	140
Two	168
Three or Four	203
Five to Nine	296
Ten or More	539

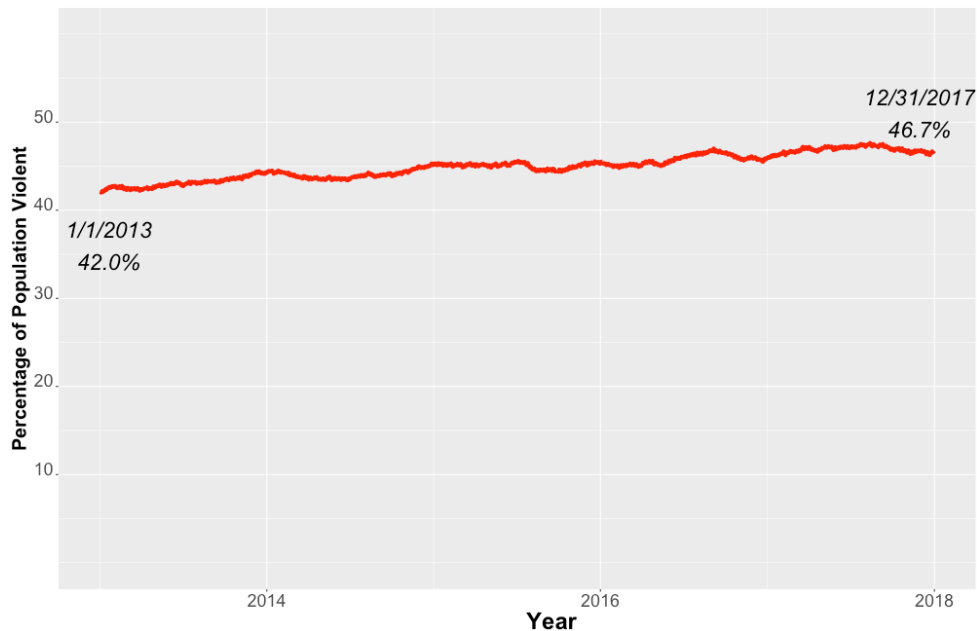

These longer periods of hospitalization for the most violent patients has the consequence of increasing the percentage of violent patients (see [Section II.1.G](#))

G. Increased Length of Hospitalization for More Violent Patients Results in Higher Percentage of These Dangerous Patients Residing in the Hospitals

Because of both a) the more rapid admission and discharge of patients who are not violent in DSH hospitals and b) the increased length of stay/hospitalization for patients who are violent in DSH, the overall percentage of patients committing violent acts continues to increase over time.

As noted before, most patients who are admitted to DSH are not violent in the hospitals, despite the overwhelming majority of them being involuntarily hospitalized due to previous violent/dangerous behavior. If a patient in DSH is violent while hospitalized, they are retained and generally treated for longer. As can be seen in Figure II.10 (and in more detail on Figure II.11) the percentage of patients residing in DSH who were violent in a DSH hospital during their treatment stay has been increasing.

Figure II.10
DSH Hospitals 2013-2017 Daily Percentage of In-Hospital Assaultive Patients Residing in Hospitals

Because violent patients are more likely to be violent again while hospitalized, and the composition of patients in DSH hospitals is becoming increasingly violent, there are reasons to be concerned about the potential for increased risk and exposure to violence in our hospitals, for both patients and staff.

2. Rates of Violence, By Hospital

A. DSH-Atascadero

Figure II.12
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. See [Section II.1.C](#) for further details.

- ▶▶ While percentages vary across different legal classes, overall, in 2017 the number of patient-on-patient assaults decreased 24.2% from the 2016 total (see Table II.4), while the number of patient-on-staff assaults decreased by 13.9% from 2016 (see Table II.5).
- ▶▶ Coupled with a population increase (measured in “total patient days”) in 2017 of 0.6%, the rate of patient-on-patient assault decreased 24.6% from 2016 (see Table II.4), while the rate of patient-on-staff assault decreased 14.4% from 2016 (see Table II.5).

The following tables provide a yearly summary of the year-over-year changes in the assault rates.

Table II.3
DSH-Atascadero Yearly A2 Patient-on-patient Assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	768	414313	1.854	NA
2011	684	408478	1.675	-9.7
2012	550	399075	1.378	-17.7
2013	396	384207	1.031	-25.2
2014	442	393194	1.124	9
2015	503	404796	1.243	10.6
2016	538	427041	1.26	1.4
2017	408	429536	0.95	-24.6

Table II.4
DSH-Atascadero Yearly A4 Patient-on-staff Assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	399	414313	0.963	NA
2011	409	408478	1.001	3.9
2012	448	399075	1.123	12.2
2013	227	384207	0.591	-47.4
2014	235	393194	0.598	1.2
2015	217	404796	0.536	-10.4
2016	438	427041	1.026	91.4
2017	377	429536	0.878	-14.4

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities.

The following figure and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), information that has routinely been collected on staff assaults since 2016.

Figure II.13
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Atascadero

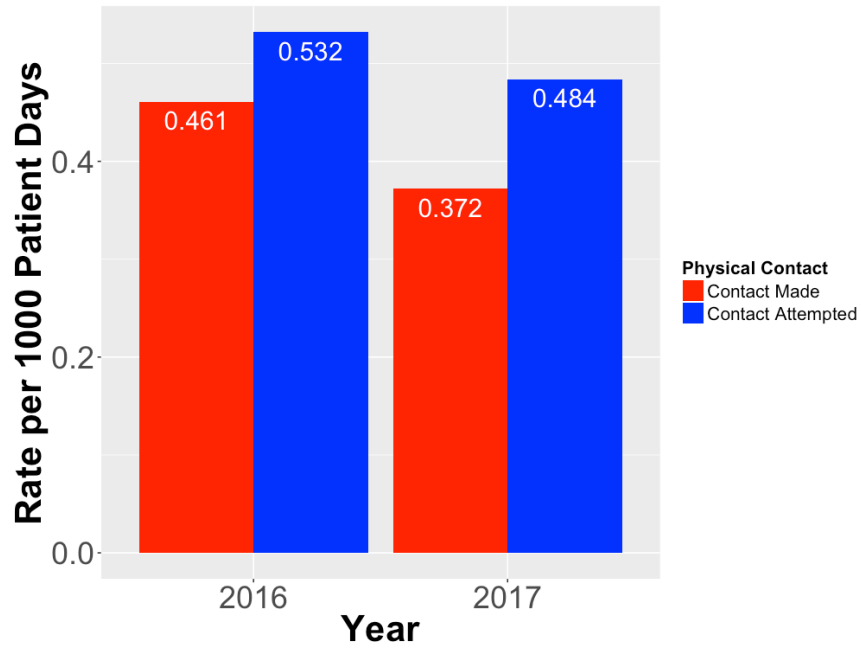

Table II.5
DSH – Atascadero Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	197	427041	0.461	NA
2016	Contact Attempted	227	427041	0.532	NA
2017	Contact Made	160	429536	0.372	-19.3
2017	Contact Attempted	208	429536	0.484	-8.9

B. DSH-Coalinga

Figure II.14
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Coalinga

- ▶▶ While percentages vary across different legal classes, overall, in 2017 the number of patient-on-patient assaults increased 13.5% from the 2016 total (see Table II.6), while the number of patient-on-staff assaults increased by 18.5% from 2016 (see Table II.7).
- ▶▶ Coupled with a population increase (measured in “total patient days”) in 2017 of 0.8%, the rate of patient-on-patient assault increased 12.6% from 2016 (see Table II.6), while the rate of patient-on-staff assault increased 17.5% from 2016 (see Table II.7).

The following tables provide a yearly summary of the year-over-year changes in the assault rates.

Table II.6
DSH-Coalinga Yearly A2 Patient-on-Patient Assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	352	347927	1.012	NA
2011	290	352043	0.824	-18.6
2012	344	378122	0.91	10.4
2013	317	397491	0.798	-12.3
2014	312	421876	0.74	-7.3
2015	233	443186	0.526	-28.9
2016	266	465696	0.571	8.6
2017	302	469359	0.643	12.6

Table II.7
DSH-Coalinga Yearly A4 Patient-on-staff Assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	323	347927	0.928	NA
2011	359	352043	1.02	9.9
2012	440	378122	1.164	14.1
2013	411	397491	1.034	-11.2
2014	326	421876	0.773	-25.2
2015	238	443186	0.537	-30.5
2016	292	465696	0.627	16.8
2017	346	469359	0.737	17.5

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted) that have routinely been collected since 2016.

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	118	427041	0.276	NA
2016	Contact Attempted	169	427041	0.396	NA
2017	Contact Made	147	429536	0.342	23.9
2017	Contact Attempted	197	429536	0.459	15.9

C. DSH-Metropolitan

Figure II.16
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Metropolitan

- ▶▶ While percentages vary across different legal classes, overall, in 2017 the number of patient-on-patient assaults remained the same from the 2016 total (see Table II.9), while the number of patient-on-staff assaults increased by 13.7% from 2016 (see Table II.10).
- ▶▶ Coupled with a population increase (measured in “total patient days”) in 2017 of 6.0%, the rate of patient-on-patient assault decreased 5.6% from 2016 (see Table II.9), while the rate of patient-on-staff assault increased 10.1% from 2016 (see Table II.10).

The following tables provide a yearly summary of the year-over-year changes in the assault rates.

Table II.9
DSH-Metropolitan Yearly A2 Patient-on-patient Assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1034	235768	4.386	NA
2011	1186	226342	5.24	19.5
2012	1060	234956	4.511	-13.9
2013	909	238968	3.804	-15.7

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	498	427041	1.166	NA
2016	Contact Attempted	156	427041	0.365	NA
2017	Contact Made	512	429536	1.192	2.2
2017	Contact Attempted	255	429536	0.594	62.5

D. DSH-Napa

Figure II.18
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Napa

- ▶▶ While percentages vary across different legal classes, overall, in 2017 the number of patient-on-patient assaults increased 8.8% from the 2016 total (see Table II.6), while the number of patient-on-staff assaults increased by 25.3% from 2016 (see Table II.7).
- ▶▶ Coupled with a population decrease (measured in “total patient days”) in 2017 of 0.3%, the rate of patient-on-patient assault increased 9.2% from 2016 (see Table II.6), while the rate of patient-on-staff assault increased 25.7% from 2016 (see Table II.7).

The following tables provide a yearly summary of the year-over-year changes in the assault rates.

Table II.12
DSH-Napa Yearly A2 Patient-on-patient Assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1317	427010	3.084	NA
2011	1037	430347	2.41	-21.9
2012	1075	441413	2.435	1
2013	999	437114	2.285	-6.2

2016	531	571873	0.929	-8.7
2017	638	564779	1.13	21.6

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted) that have routinely been collected since 2016.

Figure II.21
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Patton

Table II.17
DSH – Patton Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	264	427041	0.618	NA
2016	Contact Attempted	261	427041	0.611	NA
2017	Contact Made	296	429536	0.689	11.5
2017	Contact Attempted	328	429536	0.764	24.9

3. Number of Individual (Unique) Patient Aggressors

Patients and Aggressors in 2010

As can be seen in Figure II.22, in 2010 the total number of patients treated in DSH hospitals during the year numbered about 8,900. Of these, most patients were not violent (shown in green), while a total of 2,426 were violent (the number of patients having 1-9 violent acts was 2,254, those with 10 or more violent acts numbered 172).

Thus, violent patients as a percentage of all patients treated were 27.3% of all those treated during 2010. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually between 42 to 47%.

In 2010, the 172 patients with 10 or more violent incidents in that year accounted for 35.9% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.22
2010 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2011

As can be seen in Figure II.23, in 2011 the total number of patients treated in DSH hospitals during the year numbered about 8,800. Of these, most patients were not violent, while a total of 2,387 were violent (the number of patients having 1-9 violent acts was 2,239, those with 10 or more violent acts numbered 148).

Thus, violent patients as a percentage of all patients treated were about 27.2% of all those treated during 2011. As noted previously [in Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2011, the 148 patients with 10 or more violent incidents in that year accounted for 33.4% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.23
2011 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2012

As can be seen in Figure II.24, in 2012 the total number of patients treated in DSH hospitals was over 8,700. Of these, most patients were not violent, but 2,222 patients were violent (the number of patients having 1-9 violent acts was 2,063, those with 10 or more violent acts numbered 159).

Thus, violent patients as a percentage of all patients treated were about 25.4% of all those treated during 2012. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2012, the 159 patients with 10 or more violent incidents in that year accounted for 38.2% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.24
2012 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2013

As can be seen in Figure II.25, in 2013 the total number of patients treated in DSH hospitals was about 9,000. Again, most patients were not violent, but 2,131 patients were violent (the number of patients having 1-9 violent acts was 2,014, those with 10 or more violent acts numbered 117).

Thus, violent patients as a percentage of all patients treated were about 23.7% of all those treated during 2013. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2013, the 117 patients with 10 or more violent incidents in that year accounted for 35.2% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.25
2013 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2014

As can be seen in Figure II.26, in 2014 the total number of patients treated in DSH hospitals was over 9,200. Again, most patients were not violent, but 2,180 patients were violent (the number of patients having 1-9 violent acts was 2,069, those with 10 or more violent acts numbered 111).

Thus, violent patients as a percentage of all patients treated were about 23.5% of all those treated during 2014. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2014, the 111 patients with 10 or more violent incidents in that year accounted for 34.4% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.26
2014 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2015

As can be seen in Figure II.27, in 2015 the total number of patients treated in DSH hospitals was over 9,800. Again, most patients were not violent, but 2,273 patients were violent (the number of patients having 1-9 violent acts was 2,150, those with 10 or more violent acts numbered 123).

Thus, violent patients as a percentage of all patients treated were about 23.1% of all those treated during 2015. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2015, the 123 patients with 10 or more violent incidents in that year accounted for 33.7% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.27
2015 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2016

As can be seen in Figure II.28, in 2016 the total number of patients treated in DSH hospitals was over 10,000. Again, most patients were not violent, but 2,359 patients were violent (the number of patients having 1-9 violent acts was 2,203, those with 10 or more violent acts numbered 156).

Thus, violent patients as a percentage of all patients treated were about 23.2% of all those treated during 2016. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2016, the 153 patients with 10 or more violent incidents in that year accounted for 37.4% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.28
2016 DSH Patients and Aggressors, 1 Square = 1 Patient

Patients and Aggressors in 2017

As can be seen in Figure II.29, in 2017 the total number of patients treated in DSH hospitals was just under 10,500. Again, most patients were not violent, but 2,400 patients were violent (the number of patients having 1-9 violent acts was 2,249, those with 10 or more violent acts numbered 151).

Thus, violent patients as a percentage of all patients treated were about 22.9% of all those treated during 2017. As noted previously in [Section II.1.F](#), because the hospitals will more rapidly discharge non-violent patients and retain violent patients for further treatment at any given time the hospital population had a much higher percentage of violent patients, usually around 42 to 47%.

In 2017, the 151 patients with 10 or more violent incidents in that year accounted for 38.9% of all violent patient-on-patient and patient-on-staff assault incidents; see [Section II.5](#) of this report for more information on this.

Figure II.29
2017 DSH Patients and Aggressors, 1 Square = 1 Patient

■ Non-Violent Patients (8099) ■ Violent Patients <10 Incidents (2249) ■ Repeatedly Violent Patients (151)

4. Patient Injury Severity Data

In this section, the information on patient injury severity is presented, grouped by whether a patient was described as a “victim” or as an “aggressor.”

For both groups, the information is given by descriptors “S1” through “S5” based on the level of treatment needed by the patient (“S1” being the least severe injury level, and “S5” being the most severe), see the descriptors in Table II.18:

Table II.18
Injury Severity Codes and Descriptions

CODE	DESCRIPTION
S1	No treatment
S2	Minor first aid
S3	Medical treatment
S4	Hospitalization
S5	Death

Readers should note that this report only contains information on patient injuries. Consistent staff injury data collection presents unique challenges due to the confidential nature of staff’s protected health information. As a result, there is currently no way to reliably collect that data.

The injury severity rates are presented in terms of rates per 100,000 patient days.

A. Patient Victim Injuries Suffered During Assaults

Injury Severity SI – No Treatment

Figure II.30

Annual Rate of Patient Injury Due to Assault: Severity SI - No Treatment (Victims), per 100,000 Patient Days

Table II.19

SI Victim Injury Rates

YEAR	TOTAL PATIENT DAYS	COUNT	RATE PER 100,000 DAYS
2010	1999977	2024	101.2
2011	1981811	1882	95

2017	2210321	0	0

5. Number of Patients with 10 or More Assaults per Year

A. Patients with 10 or More Aggressive Acts in a Single Year

The number of individual patients with more than 10 aggressive/violent incidents per year decreased from the previous year, as can be seen in Figure II.35. This is despite a 3.1% increase in total patients in 2017 (there were 10,186 unique patients treated in DSH during 2016 and 10,499 unique patients treated in 2017).

Figure II.35
Number of Individual Patients with 10 or More Assaults in a Calendar Year

Table II.24
Year-by-Year Summary of Patients with 10 or More Aggressive Acts

YEAR	SUMMARY
2010	172 patients with 10 or more violent incidents accounted for 35.9% of all violent patient-on-patient and patient-on-staff assault incidents
2011	148 patients with 10 or more violent incidents accounted for 33.4% of all violent patient-on-patient and patient-on-staff assault incidents
2012	159 patients with 10 or more violent incidents accounted for 38.2% of all violent patient-on-patient and patient-on-staff assault incidents
2013	117 patients with 10 or more violent incidents accounted for 35.2% of all violent patient-on-patient and patient-on-staff assault incidents
2014	111 patients with 10 or more violent incidents in that year accounted for 34.4% of all violent patient-on-patient and patient-on-staff assault incidents
2015	123 patients with 10 or more violent incidents accounted for 33.7% of all violent patient-on-patient and patient-on-staff assault incidents
2016	156 patients with 10 or more violent incidents accounted for 37.4% of all violent patient-on-patient and patient-on-staff assault incidents
2017	151 patients with 10 or more violent incidents accounted for 38.9% of all violent patient-on-patient and patient-on-staff assault incidents

Note: See [Section II.5](#) of this report for more information on this table.

B. Patients with 10 or More Aggressive Acts Two Years in a Row

Figure II.36
Patients with 10 or More Violent Acts, Across Two Consecutive Calendar Years

As the Figure II.36 shows, there was a consistent number of patients with 10 or more violent incidents across two consecutive calendar years during 2010-2017. As a rate, the 48 patients in 2013-14 represent 0.26% of the total patients treated those years; the 50 patients in 2014-15 represent again 0.26%, the 59 patients in 2015-16 represent about 0.29% of all the patients treated in DSH during those periods, and the 53 patients in 2016-17 represent about 0.26%.

C. Patients with 10 or More Violent Acts, For Any Two, Three Year Period, or For All Four Years

Figure II.37

Patients with 10 or More Violent Incidents Across Any Two or More Years (Not Necessarily Consecutive), or for All Eight Years During 2010-2017

When any multiple year period (not necessarily consecutive years) is considered, there are a very small number of patients who had multiple, repeated high levels of violence (more than 10 incidents in a year).

Individual Breakdown:

- The 5 patients on the list of patients with 10 or more violent acts, for all eight years during 2010-2017, accounted for 1713 incidents, or about 346.2 violent acts for each individual patient, on average, during this entire time period.
- The 3 patients who were on the list of patients with 10 or more violent incidents, for seven years during 2010-17, also accounted for 693 aggressive/violent incidents, or about 231 violent acts per patient, on average for this time period.
- The 2 patients who were on the list of patients with 10 or more violent incidents, for six years during 2010-17, also accounted for 416 aggressive/violent incidents, or about 208 violent acts per patient, on average for this time period.
- The 19 patients on the list for five years accounted for 2,337 aggressive/violent incidents, or about 123 violent acts per patient, on average.

- The 21 patients on the list for four years accounted for 2,056 aggressive/violent incidents, or about 97.9 violent acts per patient, on average.
- The 63 patients on the list for three years accounted for 4,170 aggressive/violent incidents, or about 66.2 violent acts per patient, on average.
- The 128 patients on the list for any two (not necessarily consecutive) years accounted for 6,470 violent incidents, or about 50.5 violent acts per individual patient, on average.

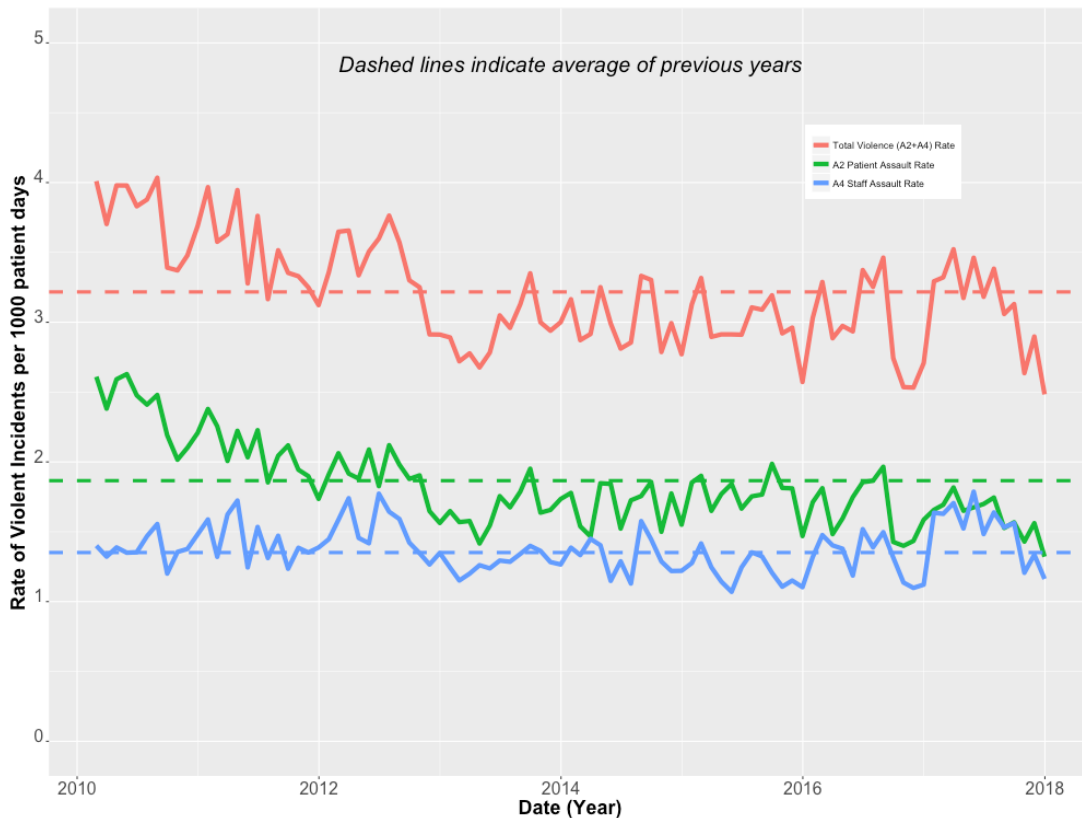

By way of comparison, this small group of patients (numbering 241, or about 0.67% of the total 36,105 unique patients treated during 2010-17) were involved as aggressors in 17,855 violent physical patient-on-patient or patient-on-staff assaults (approximately 29.6% of all the violent incidents recorded) during this eight year period 2010-2017.

Section III: In-Depth Analysis of Monthly Violence Data

I. Monthly Violence Rates Across DSH Overall

A. Monthly Rates of Assaults

Figure III.1
DSH Monthly Rates of Aggressive Incidents, per 1000 Patient Days

This graph shows the monthly rate of violence, per 1000 patient days. This measure (rate per 1000 patient days) takes into account the changes in DSH population (as well as differences in the number of days in a month).

Additionally, this graph also shows the normal amount of variation on a monthly basis. To better understand and interpret these rates of violence, the next graph will look at these data with smoothing applied to facilitate understanding of the data trends.

B. Monthly Rates of Assaults: Trend

Figure III.2
DSH Trend of Rates of Aggressive Incidents, per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

This graph shows the monthly rates, with smoothing applied to reduce monthly variability, as an aid in interpretation. As seen here, the trend has been for a decrease in assault rates from 2010 through late 2013, with violence rates afterward becoming more flat. More recently, since 2016, patient assault rates have trended lower while staff assault rates have increased.

Further details of monthly rates are presented in Tables III.2 and III.3.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table below notes, comparing 2017 to 2016, whether an increase or decrease was seen overall in violence (patient or staff) across legal classes.

Table III.1
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
IST	Increased	Increased
LPS	Decreased	Increased
MDO	Decreased	Decreased
NGRI	Decreased	Decreased
PC2684	Increased	Increased
SVP	Increased	Increased

Note: Comparisons based on average of monthly rates for that year. See tables below for each legal class.

October	2017	269	227	496
November	2017	284	243	527
December	2017	249	219	468

This table shows the monthly totals of violent incidents (A2 patient-on-patient assault and A4 patient-on-staff assault, with the new code A8 added starting in January 2016) in DSH.

As mentioned earlier, monthly totals should not be used for reporting violence or for analysis, as these numbers do not take into account such factors as changes in patient population and/or number of days in a month. During this time period, DSH census (as measured by Average Daily Census) increased by 13.6%, which the monthly totals do not take into account.

These data are presented simply for completeness and to introduce the reader to the need for developing a rate-based measure for describing violence.

See the next table on monthly rates for further details and analysis.

Table III.3
DSH Monthly Rates of Assaults, per 1000 Patient Days

MONTH	YEAR	PATIENT-ON-PATIENT ASSAULT RATE (A2)	PATIENT-ON-STAFF ASSAULT RATE (A4)	TOTAL VIOLENCE RATE (A2+A4)
February	2010	2.610	1.400	4.010
March	2010	2.382	1.322	3.703
April	2010	2.592	1.388	3.980

November	2014	1.774	1.219	2.993
December	2014	1.551	1.221	2.771
January	2015	1.853	1.276	3.129
February	2015	1.901	1.416	3.317
March	2015	1.650	1.246	2.895
April	2015	1.770	1.143	2.913
May	2015	1.843	1.070	2.913
June	2015	1.666	1.245	2.911
July	2015	1.753	1.353	3.106
August	2015	1.767	1.324	3.090
September	2015	1.986	1.207	3.193
October	2015	1.814	1.107	2.921
November	2015	1.811	1.151	2.961
December	2015	1.469	1.103	2.573
January	2016	1.712	1.319	3.031

MONTH	YEAR	PATIENT-ON-PATIENT ASSAULT RATE (A2)	PATIENT-ON-STAFF ASSAULT RATE (A4)	TOTAL VIOLENCE RATE (A2+A4)
February	2016	1.812	1.476	3.288
March	2016	1.483	1.402	2.886
April	2016	1.595	1.378	2.974
May	2016	1.748	1.187	2.935
June	2016	1.855	1.518	3.374
July	2016	1.865	1.388	3.254
August	2016	1.965	1.497	3.462
September	2016	1.427	1.316	2.743
October	2016	1.399	1.137	2.536
November	2016	1.434	1.098	2.532
December	2016	1.586	1.121	2.708
January	2017	1.657	1.636	3.293
February	2017	1.693	1.628	3.322
March	2017	1.817	1.705	3.522
April	2017	1.650	1.524	3.174
May	2017	1.675	1.787	3.462
June	2017	1.699	1.484	3.183
July	2017	1.745	1.638	3.383
August	2017	1.527	1.532	3.059
September	2017	1.568	1.562	3.130
October	2017	1.430	1.206	2.636
November	2017	1.562	1.336	2.898
December	2017	1.321	1.162	2.484

These data show the values that were graphed in the monthly plot of violence rates (Figure III.1, “DSH Monthly Rates of Aggressive Incidents, per 1000 Patient Days”. Again, the monthly variability in violence can make discerning a trend difficult. For this reason, using the “smoothed” plots (such as Figure III.2) to look for trends over time is more useful.

2. Overall DSH Rates of Violence, By Legal Class

This section presents information on the violence rates for each legal class in DSH. The analyses in this section take all the patients in a given legal class across all DSH hospitals and computes the violence rate overall for that legal class. These data include only those patients in DSH hospitals.

To provide a quick comparison of the changes in patient composition over the past year, the Average Daily Census (ADC) for each Legal Class for the last month of 2015, 2016 and 2017 is provided in Table III.4. As can be seen since 2015, the IST population shifted into the most numerous patient group.

Table III.4
DSH Average Daily Census, by Legal Class

LEGAL CLASS	ADC 12/2015	ADC 12/2016	ADC 12/2017
DJJ: Division of Juvenile Justice Patient	1	3	2
IST: Incompetent to Stand Trial Patient	1453.49	1516.88	1439.28
LPS: Lanternman-Petris-Short Patient	624.44	667.13	707.84
MDO: Mentally Disordered Offender Patient	1257.16	1247.29	1338.61
MDSO: Mentally Disordered Sexual Offender	25	23	19
NGRI: Not Guilty by Reason of Insanity Patient	1405.38	1383.59	1358.07
PC2684: Mentally Ill CDCR Inmate Patient	222.64	264.07	267.58
SVP: Sexually Violent Predator Patient	921.42	945.06	946.12

Data on the violence rates in DSH, per legal class, are presented, in rank order of the most numerous legal class to the least numerous, i.e., first, a) the IST legal class, then second, b) the NGRI legal class, followed by third, c) the MDO's, then d) the SVP's, then the e) LPS, then f) PC2684's, g) the MDSO's, and finally h) the DJJ.

A. DSH Rates of Violence: IST's

Yearly Violence Rates

Figure III.3
Yearly Rates of IST Assaults in all DSH Hospitals

As can be seen in the graph above, after several years of declining assault rates the assault rates for both violence against other patients and staff increased in 2017. More detailed information is presented in the tables on the next page.

Table III.5
DSH IST Yearly A2 Patient-on-patient Assault Summary

YEAR	IST ASSAULTS (A2)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1284	412814	3.11	NA
2011	1068	423101	2.524	-18.8
2012	985	443410	2.221	-12
2013	1033	464883	2.222	0
2014	1062	489775	2.168	-2.4
2015	1090	515555	2.114	-2.5
2016	1023	551705	1.854	-12.3
2017	1040	542090	1.919	3.5

Table III.6
DSH IST Yearly A4 Patient-on-staff Assault Summary

YEAR	IST ASSAULTS (A4)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	608	412814	1.473	NA
2011	633	423101	1.496	1.6
2012	699	443410	1.576	5.3
2013	561	464883	1.207	-23.4
2014	713	489775	1.456	20.6
2015	710	515555	1.377	-5.4
2016	780	551705	1.414	2.7
2017	1053	542090	1.942	37.3

Monthly Violence Rates

Monthly Rates of IST Assaults in all DSH Hospitals, per 1000 Patient Days

Trend of Monthly Violence Rates

Figure III.5
Trends of Monthly Rates of IST Assaults in all DSH Hospitals, per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

B. DSH Rates of Violence: NGRI's

Yearly Violence Rates

Figure III.6
Yearly Rates of NGRI Assaults in all DSH Hospitals

As can be seen in the graph above, after several years of declining assault rates, in 2017 the assault rates for both violence against other patients and staff decreased in 2017. More detailed information is presented in the tables on the next page.

Table III.7
DSH NGRI Yearly A2 Patient-on-patient Assault Summary

YEAR	NGRI ASSAULTS (A2)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	690	429444	1.607	NA
2011	630	478572	1.316	-18.1
2012	549	478822	1.147	-12.8
2013	456	483124	0.944	-17.7
2014	429	491044	0.874	-7.4
2015	424	497373	0.852	-2.5
2016	473	497814	0.95	11.5
2017	432	491634	0.879	-7.5

Table III.8
DSH NGRI Yearly A4 Patient-on-staff Assault Summary

YEAR	NGRI ASSAULTS (A4)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	310	429444	0.722	NA
2011	349	478572	0.729	1
2012	429	478822	0.896	22.9
2013	439	483124	0.909	1.5
2014	323	491044	0.658	-27.6
2015	289	497373	0.581	-11.7
2016	324	497814	0.651	12
2017	313	491634	0.637	-2.2

C. DSH Rates of Violence: MDO's

Yearly Violence Rates

Figure III.9
Yearly Rates of MDO Assaults in all DSH Hospitals

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. When using the same methodology as previous DSH Violence Reports, a DSH wide 2% decrease in the rate of patient-on-staff assaults from 2015 to 2016 can be seen. See [Section II.1.B](#) for further details.

**Table III.9
 DSH MDO Yearly A2 Patient-on-patient Assault Summary**

YEAR	MDO ASSAULTS (A2)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	856	430649	1.988	NA
2011	828	480322	1.724	-13.3
2012	736	462661	1.591	-7.7
2013	560	441587	1.268	-20.3
2014	526	440627	1.194	-5.8
2015	600	459120	1.307	9.5
2016	624	453990	1.374	5.1
2017	510	473469	1.077	-21.6

**Table III.10
 DSH MDO Yearly A4 Patient-on-staff Assault Summary**

YEAR	MDO ASSAULTS (A4)	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	521	430649	1.21	NA
2011	620	480322	1.291	6.7
2012	563	462661	1.217	-5.7
2013	378	441587	0.856	-29.7
2014	330	440627	0.749	-12.5
2015	321	459120	0.699	-6.7
2016	458	453990	1.009	44.3
2017	396	473469	0.836	-17.1

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. When using the same methodology as previous DSH Violence Reports, a DSH wide 2% decrease in the rate of patient-on-staff assaults from 2015 to 2016 can be seen. See [Section II.1.B](#) for further details.

Monthly Rates of PC2684 Assaults in all DSH Hospitals, per 1000 Patient Days

Trend of Monthly Violence Rates

Figure III.20
Trend of Monthly Rates of PC2684 Assaults in all DSH Hospitals, per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#).

Appendices

In the sections following, a more detailed presentation of the individual hospital violence data is presented. First, a review of the yearly summary is presented, then a monthly summary, and then a monthly summary by each legal class at the hospital is shown. Readers should be aware of the differences in the population of each legal class across hospitals, as well as the differences in population across legal classes inside each hospital.

DSH-Atascadero

This section reviews and then further extends information presented earlier in this report.

In the first section, the overall hospital population from the Average Daily Census (ADC) is given for each month during 2010-2017 and broken down by legal class.

In the second section, the yearly rates of violence presented earlier are reviewed, and then in the following sections, the monthly rates of violence and trend of violence is given.

In the remaining sections, the rates of violence by each individual legal class in the hospital is given for the major groups at each hospital (i.e., IST's, NGRI's, MDO's, LPS, and SVP's). When a given legal class' numbers are less than 20 at a hospital (typically DJJ or MDSO's), the overall data is not presented, as the numbers are too small to draw conclusions about that legal class (i.e., acts of violence are more related to an individual patient or just a few patients than to the legal class as a whole).

Please note that prior to January 1, 2016 DSH-Atascadero (where the majority of MDO patients are housed) coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made or when physical contact was attempted. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. When using the same methodology as previous DSH Violence Reports, a DSH wide 2% decrease in the rate of patient-on-staff assaults from 2015 to 2016 can be seen. See Section II.1.C for further details.

As can be seen, there were no DJJ patients at DSH-Atascadero during this time. Additionally, the numbers of LPSs, MDSOs, and SVPs were too few to allow conclusions to be drawn about violence trends, and so will not be presented.

Rates of Violence at DSH-Atascadero

Yearly Rates

Figure III.21
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. When using the same methodology as previous DSH Violence Reports, a DSH wide 2% decrease in the rate of patient-on-staff assaults from 2015 to 2016 can be seen. See [Section II.1.B](#) for further details.

- Overall, the total number of patient assaults decreased 24.2% over the 2016 total, while the total number of staff assaults decreased 13.9% from 2016.
- Coupled with a population increase (measured in “total patient days”) in 2016 of about 0.6% the **rate** of patient-on-patient assault decreased 24.6% over 2016, while the **rate** of patient-on-staff assault decreased 14.4% from 2016.

Table III.18
DSH-Atascadero Yearly A2 Patient-on-patient Assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	768	414313	1.854	NA
2011	684	408478	1.675	-9.7
2012	550	399075	1.378	-17.7
2013	396	384207	1.031	-25.2
2014	442	393194	1.124	9
2015	503	404796	1.243	10.6
2016	538	427041	1.26	1.4
2017	408	429536	0.95	-24.6

Table III.19
DSH-Atascadero Yearly A4 Patient-on-staff Assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	399	414313	0.963	NA
2011	409	408478	1.001	3.9
2012	448	399075	1.123	12.2
2013	227	384207	0.591	-47.4
2014	235	393194	0.598	1.2
2015	217	404796	0.536	-10.4
2016	438	427041	1.026	91.4
2017	377	429536	0.878	-14.4

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. When using the same methodology as previous DSH Violence Reports, a DSH wide 2% decrease in the rate of patient-on-staff assaults from 2015 to 2016 can be seen. See [Section II.1.B](#) for further details.

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), which has routinely been collected since 2016.

Figure III.22
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Atascadero

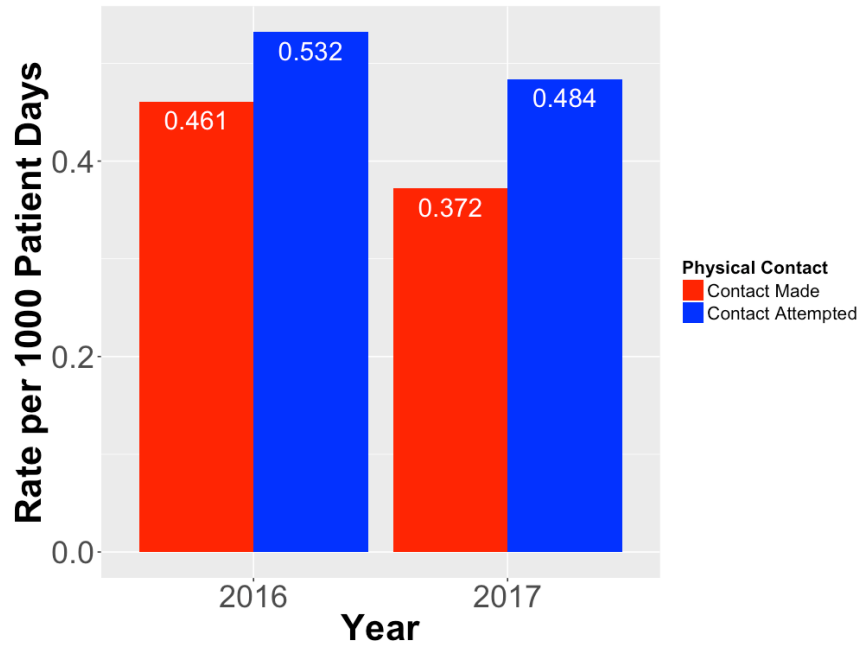

Table III.20
DSH – Atascadero Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	197	427041	0.461	NA
2016	Contact Attempted	227	427041	0.532	NA
2017	Contact Made	160	429536	0.372	-19.3
2017	Contact Attempted	208	429536	0.484	-8.9

Monthly Rates

The previous barplot showing the violence rates as an overall yearly average does not show the monthly variability in the rates that occurs regularly. Two figures are shown, the first being a plot of the violence rates on a monthly basis, and the second showing the violence rates for each month averaged over the six months before and after each month, to create a “smoothed” plot (much like you would see in a financial article, where daily results are “smoothed” to better discern trends over time).

Figure III.23
DSH-Atascadero Monthly Rates of Violence per 1000 Patient Days

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.1.C](#) for further details.

Trend of Monthly Rates

Figure III.24
DSH-Atascadero Trends of Monthly Rates of Violence per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016 See [Section II.I.C](#) for further details.

Figure III.24 shows the trend of the monthly violence rates (patient-on-patient assault, patient-on-staff assault, and total patient-on-patient and patient-on-staff assault) for DSH-Atascadero. The dashed lines indicate the previous years (2010-2016) average rate for each category, for comparison with 2017.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table comparing 2017 to 2016 below notes whether an increase or decrease was seen in violence (patient or staff) at DSH-Atascadero across legal classes.

Table III.21
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
IST	Increased	Increased
MDO	Decreased	Decreased
NGRI	Decreased	Increased
PC2684	Decreased	Increased

Note: Comparisons based on average of monthly rates for that year. See following tables for each legal class.

Table III.22 provides a yearly summary of the year-over-year changes in the assault rates.

Table III.22

Violence Rates by Major Legal Classes

DSH-Atascadero IST's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.25
Trends of Monthly Rates of Violence for IST's at DSH-Atascadero

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. [See Section II.I.C](#) for further details.

Monthly Rates Data

The information for each month’s rates are given here. As can be seen, the monthly data typically produces a “saw tooth” pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the “smoothed” plot of the trends (previous figure).

Figure III.26
Monthly Rates of Violence for IST’s at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.1.C](#) for further details.

Table III.23
DSH-Atascadero IST Monthly Rates of Violence

DATE	A2 PATIENT-ON-PATIENT ASSAULT RATE	A4 PATIENT-ON-STAFF ASSAULT RATE	TOTAL VIOLENCE (A2+A4) RATE

DSH-Atascadero MDO's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.27
Trends of Monthly Rates of Violence for MDO's at DSH-Atascadero

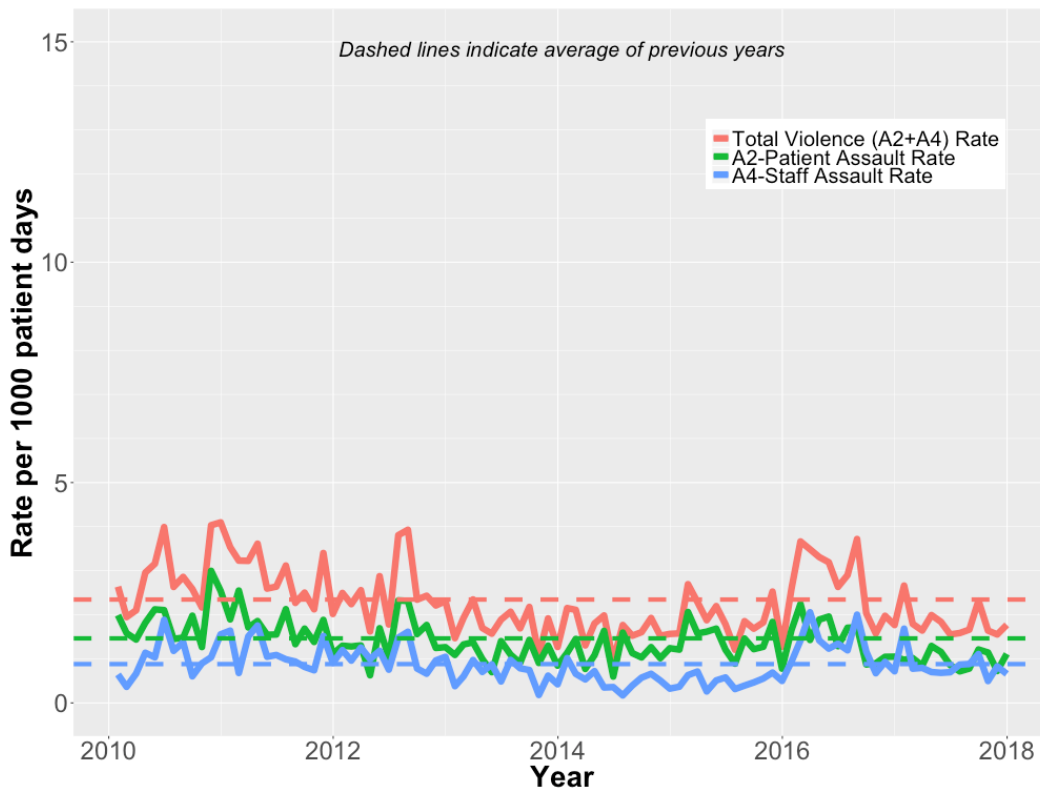

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.I.C](#) for further details.

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.28
Monthly Rates of Violence for MDO's at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.I.C](#) for further details.

DSH-Atascadero NGRI's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.29
Trends of Monthly Rates of Violence for NGRI's at DSH-Atascadero

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016.. See [Section II.I.C](#) for further details.

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.30
Monthly Rates of Violence for NGRI's at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.1.C](#) for further details.

DSH-Atascadero PC2684's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.31

Trends of Monthly Rates of Violence for PC2684's at DSH-Atascadero

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.I.C](#) for further details.

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.32
Monthly Rates of Violence for PC2684's at DSH-Atascadero

Note: Prior to January 1, 2016 DSH-Atascadero coded an assault as Patient-on-staff (A4) only when physical contact was made between patient and staff. All other DSH facilities code an assault as Patient-on-staff (A4) either when physical contact was made **or** when physical contact was **attempted**. On January 1, 2016 DSH-Atascadero began coding assaults in the same manner as all other DSH facilities. This resulted in an increase in the rates A4 assaults between 2015 and 2016. See [Section II.I.C](#) for further details.

DSH-Coalinga

This section reviews and then further extends information presented earlier in this report. In the first section, the overall hospital population, given as Average Daily Census (ADC) is given for each month during 2010-2017, broken down by legal class.

In the second section, the yearly rates of violence presented earlier are reviewed, and then in the following sections, the monthly rates of violence and trend of violence is given.

In the remaining sections, the rates of violence by each individual legal class in the hospital is given for the major groups at each hospital (i.e., ISTs, NGRIs, MDOs, LPSs, and SVPs). When a given legal class' numbers are less than 20 at a hospital (typically DJJ or MDSO's), the overall data is not presented, as the numbers are too small to draw conclusions about that legal class (i.e., acts of violence are more related to an individual patient or just a few patients than to the legal class as a whole).

As can be seen, there were no DJJ or IST patients at DSH-Coalinga during this time. Additionally, the numbers of LPSs, MDSOs and NGRIs were too few to allow conclusions to be drawn about violence trends, and so will not be presented.

Rates of Violence at DSH-Coalinga

Yearly Rates

Figure III.34
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Coalinga

Table III.28

DSH-Coalinga Yearly A2 Patient-on-Patient assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	352	347927	1.012	NA
2011	290	352043	0.824	-18.6
2012	344	378122	0.91	10.4
2013	317	397491	0.798	-12.3
2014	312	421876	0.74	-7.3
2015	233	443186	0.526	-28.9
2016	266	465696	0.571	8.6
2017	302	469359	0.643	12.6

Table III.29
DSH-Coalinga Yearly A4 Patient-on-staff assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	323	347927	0.928	NA
2011	359	352043	1.02	9.9
2012	440	378122	1.164	14.1
2013	411	397491	1.034	-11.2
2014	326	421876	0.773	-25.2
2015	238	443186	0.537	-30.5
2016	292	465696	0.627	16.8
2017	346	469359	0.737	17.5

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), which has routinely been collected since 2016.

Figure III.35
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Coalinga

Table III.30
DSH – Coalinga Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	118	427041	0.276	NA
2016	Contact Attempted	169	427041	0.396	NA
2017	Contact Made	147	429536	0.342	23.9
2017	Contact Attempted	197	429536	0.459	15.9

Monthly Rates

The previous barplot showing the violence rates as an overall yearly average does not show the monthly variability in the rates that occurs regularly. Two figures are shown, the first being a plot of the violence rates on a monthly basis, and the second showing the violence rates for each month averaged over the six months before and after each month, to create a “smoothed” plot (much like you would see in a financial article, where daily results are “smoothed” to better discern trends over time).

Figure III.36
DSH-Coalinga Monthly Rates of Violence per 1000 Patient Days

Trend of Monthly Rates

Figure III.37
DSH-Coalinga Trends of Monthly Rates of Violence per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Figure III.37 shows the trend of the monthly violence rates (patient-on-patient assault, patient-on-staff assault, and total patient-on-patient and patient-on-staff assault) for DSH-Coalinga. The dashed lines indicate the previous years (2010-2016) average rate for each category, for comparison with 2017.

Table III.32 provides a yearly summary of the year-over-year changes in the assault rates.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table below notes, comparing 2017 to 2016, whether an increase or decrease was seen in violence (patient or staff) at DSH-Coalinga across legal classes.

Table III.31
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
MDO	Decreased	Increased
PC2684	Increased	Increased
SVP	Increased	Increased

Note: Comparisons based on average of monthly rates for that year. See following tables for each legal class.

Violence Rates by Major Legal Classes

DSH-Coalinga MDO's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.38
Trends of Monthly Rates of Violence for MDO's at DSH-Coalinga

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.39
Monthly Rates of Violence for MDO's at DSH-Coalinga

Table III.33
DSH-Coalinga MDO Monthly Rates of Violence

DSH-Coalinga PC2684's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.40
Trends of Monthly Rates of Violence for PC2684's at DSH-Coalinga

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

DSH-Metropolitan

This section reviews and then further extends information presented earlier in this report. In the first section, the overall hospital population, given as Average Daily Census (ADC) is given for each month during 2010-2017, broken down by legal class.

In the second section, the yearly rates of violence presented earlier are reviewed, and then in the following sections, the monthly rates of violence and trend of violence is given.

In the remaining sections, the rates of violence by each individual legal class in the hospital is given, for the major groups at each hospital (i.e., ISTs, NGRIs, MDOs, LPSs, and SVPs). When a given legal class' numbers are less than 20 at a hospital (typically DJJ or MDSOs), the overall data is not presented, as the numbers are too small to draw conclusions about that legal class (i.e., acts of violence are more related to an individual patient or just a few patients than to the legal class as a whole).

As can be seen, there were no DJJ, MDSO, PC2684, or SVP patients at DSH-Metropolitan during this time. Additionally, the numbers of MDSOs were too few to allow conclusions to be drawn about violence trends, and so will not be presented.

Rates of Violence at DSH-Metropolitan

Yearly Rates

Figure III.44
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Metropolitan

Table III.37
DSH-Metropolitan Yearly A2 Patient-on-patient assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1034	235768	4.386	NA
2011	1186	226342	5.24	19.5
2012	1060	234956	4.511	-13.9
2013	909	238968	3.804	-15.7
2014	1070	258248	4.143	8.9
2015	1193	266883	4.47	7.9
2016	1097	274136	4.002	-10.5
2017	1097	290517	3.776	-5.6

Table III.38
DSH-Metropolitan Yearly A4 Patient-on-staff assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	518	235768	2.197	NA
2011	739	226342	3.265	48.6
2012	575	234956	2.447	-25.1
2013	587	238968	2.456	0.4
2014	735	258248	2.846	15.9
2015	666	266883	2.495	-12.3
2016	673	274136	2.455	-1.6
2017	785	290517	2.702	10.1

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), which has routinely been collected since 2016.

Figure III.45
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Metropolitan

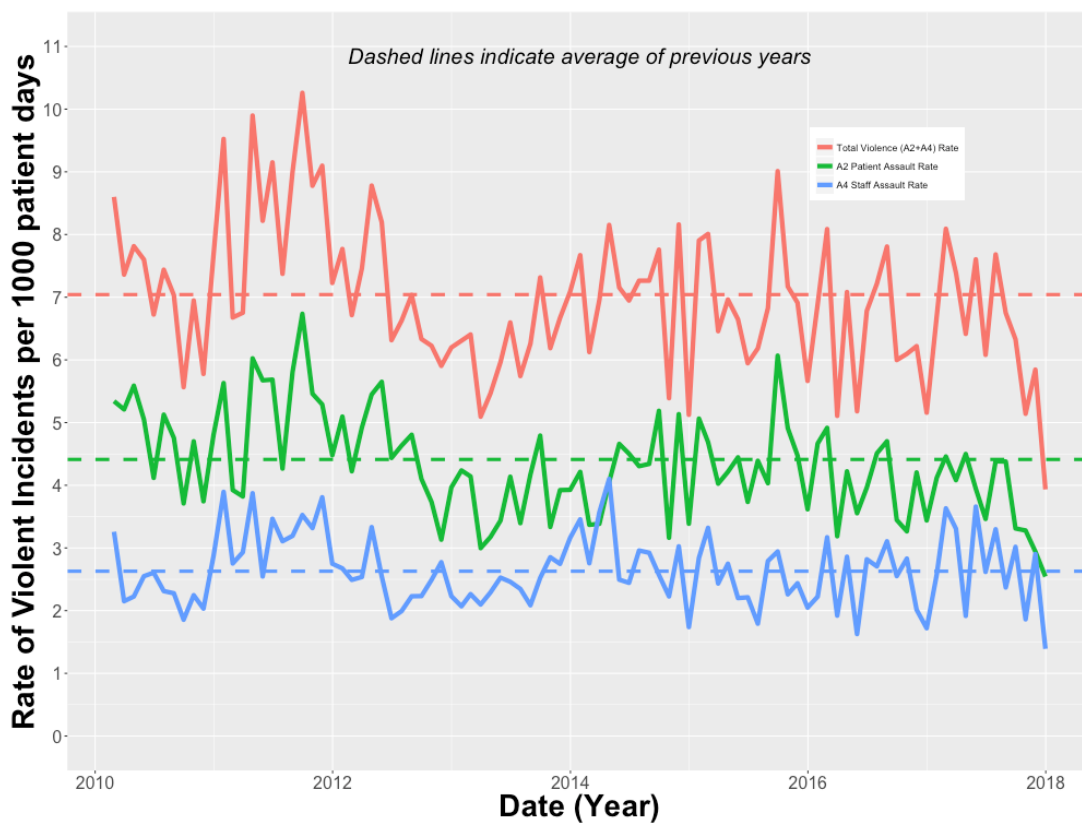

Table III.39
DSH – Metropolitan Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	498	427041	1.166	NA
2016	Contact Attempted	156	427041	0.365	NA
2017	Contact Made	512	429536	1.192	2.2
2017	Contact Attempted	255	429536	0.594	62.5

Monthly Rates

The previous barplot showing the violence rates as an overall yearly average does not show the monthly variability in the rates that occurs regularly. Two figures are shown, the first being a plot of the violence rates on a monthly basis, and the second showing the violence rates for each month averaged over the six months before and after each month, to create a “smoothed” plot (much like you would see in a financial article, where daily results are “smoothed” to better discern trends over time).

Figure III.46
DSH-Metropolitan Monthly Rates of Violence per 1000 Patient Days

Trend of Monthly Rates

Figure III.47
DSH-Metropolitan Trends of Monthly Rates of Violence per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Figure III.47 shows the trend of the monthly violence rates (patient-on-patient assault, patient-on-staff assault, and total patient-on-patient and patient-on-staff assault) for DSH-Metropolitan. The dashed lines indicate the previous years (2010-2016) average rate for each category, for comparison with 2017.

Table III.41 provides a yearly summary of the year-over-year changes in the assault rates.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table below notes, comparing 2017 to 2016, whether an increase or decrease was seen in violence (patient or staff) at DSH-Metropolitan across legal classes.

Table III.40
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
IST	Decreased	Increased
LPS	Decreased	Increased
MDO	Increased	Decreased
NGRI	Increased	Increased

Note: Comparisons based on average of monthly rates for that year. See following for each legal class

Table III.41
DSH-Metropolitan Monthly Rates of Violence

DSH-Metropolitan MDO's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.52
Trends of Monthly Rates of Violence for MDO's at DSH-Metropolitan

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

DSH-Metropolitan NGRI's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.54
Trends of Monthly Rates of Violence for NGRI's at DSH-Metropolitan

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

DSH-Napa

This section reviews and then further extends information presented earlier in this report. In the first section, the overall hospital population, given as Average Daily Census (ADC) is given for each month during 2010-2017, broken down by legal class

. In the second section, the yearly rates of violence presented earlier are reviewed, and then in the following sections, the monthly rates of violence and trend of violence is given.

In the remaining sections, the rates of violence by each individual legal class in the hospital is given, for the major groups at each hospital (i.e., ISTs, NGRIs, MDOs, LPSs, and SVPs). When a given legal class numbers less than 20 at a hospital (typically DJJ or MDSOs), the overall data is not presented, as the numbers are too small to draw conclusions about that legal class (i.e., acts of violence are more related to an individual patient or just a few patients than to the legal class as a whole).

As can be seen, there were no PC2684 or SVP patients at DSH-Napa during this time. Additionally, the numbers of DJJs and MDSOs were too few to allow conclusions to be drawn about violence trends, and so will not be presented.

Rates of Violence at DSH-Napa

Yearly Rates

Figure III.56
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Napa

Table III.47
DSH-Napa Yearly A2 Patient-on-patient assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1317	427010	3.084	NA
2011	1037	430347	2.41	-21.9
2012	1075	441413	2.435	1
2013	999	437114	2.285	-6.2
2014	939	433559	2.166	-5.2
2015	1054	439490	2.398	10.7
2016	1052	457568	2.299	-4.1
2017	1145	456130	2.51	9.2

Table III.48
DSH-Napa Yearly A4 Patient-on-staff assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	867	427010	2.03	NA
2011	775	430347	1.801	-11.3
2012	1049	441413	2.376	31.9
2013	866	437114	1.981	-16.6
2014	880	433559	2.03	2.5
2015	886	439490	2.016	-0.7
2016	962	457568	2.102	4.3
2017	1205	456130	2.642	25.7

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), which has routinely been collected since 2016.

Figure III.57
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Napa

Table III.49
DSH – Napa Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	451	427041	1.056	NA
2016	Contact Attempted	495	427041	1.159	NA
2017	Contact Made	529	429536	1.232	16.6
2017	Contact Attempted	662	429536	1.541	33

Monthly Rates

The previous barplot showing the violence rates as an overall yearly average does not show the monthly variability in the rates that occurs regularly. Two figures are shown, the first being a plot of the violence rates on a monthly basis, and the second showing the violence rates for each month averaged over the six months before and after each month, to create a “smoothed” plot (much like you would see in a financial article, where daily results are “smoothed” to better discern trends over time).

Figure III.58
DSH-Napa Monthly Rates of Violence per 1000 Patient Days

Trend of Monthly Rates

Figure III.59
DSH-Napa Trends of Monthly Rates of Violence per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Figure III.59 shows the trend of the monthly violence rates (patient-on-patient assault, patient-on-staff assault, and total patient-on-patient and patient-on-staff assault) for DSH-Napa. The dashed lines indicate the previous years (2010-2016) average rate for each category, for comparison with 2017.

Table III.51 provides a yearly summary of the year-over-year changes in the assault rates.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table below notes, comparing 2017 to 2016, whether an increase or decrease was seen in violence (patient or staff) at DSH-Napa across legal classes.

Table III.50
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
IST	Increased	Increased
LPS	Decreased	Increased
MDO	Decreased	Increased
NGRI	Increased	Decreased

Note: Comparisons based on average of monthly rates for that year. See following tables for each legal class

Table III.51

Violence Rates by Major Legal Classes

DSH-Napa IST's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.60
Trends of Monthly Rates of Violence for IST's at DSH-Napa

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.61
Monthly Rates of Violence for IST's at DSH-Napa

Table III.52
DSH-Napa IST Monthly Rates of Violence

DSH-Napa LPS's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.62
Trends of Monthly Rates of Violence for LPS's at DSH-Napa

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

DSH-Patton

This section reviews and then further extends information presented earlier in this report. In the first section, the overall hospital population, given as Average Daily Census (ADC) is given for each month during 2010-2017, broken down by legal class.

In the second section, the yearly rates of violence presented earlier are reviewed, and then in the following sections, the monthly rates of violence and trend of violence is given.

In the remaining sections, the rates of violence by each individual legal class in the hospital is given, for the major groups at each hospital (i.e., ISTs, NGRIs, MDOs, LPSs, and SVPs). When a given legal class numbers less than 20 at a hospital (typically DJJ or MDSO's), the overall data is not presented, as the numbers are too small to draw conclusions about that legal class (i.e., acts of violence are more related to an individual patient or just a few patients than to the legal class as a whole).

12/31/16	3	604.83	108.12	276.06	6	552.1	0.03	1	1551.14
1/31/17	2.13	614.51	107.1	273.09	6	547.97	0	1	1551.8
2/28/17	2	616.22	105.89	274.64	6	548.65	0.04	1	1554.44
3/31/17	2	610.36	109.09	273.67	6	548.19	0.1	1	1550.41
4/30/17	3.13	600.23	114.53	276.87	6	544.44	0	1	1546.2
5/31/17	3	594.07	116.74	277.93	6	542.2	0.06	1	1541
6/30/17	2.87	594.8	119.47	280.83	6	541.74	0.37	1	1547.08
7/31/17	2	580.71	118.81	287.81	6	544.9	1.1	1	1542.33
8/31/17	2	577.25	117.52	290.25	6	544.81	10.26	1	1549.09
9/30/17	2	576.29	122.93	292.73	6	546.73	10.47	1	1558.15
10/31/17	2	558.58	126.35	297.87	6	550.1	11.35	1	1553.25
11/30/17	2	540.24	127.17	299.5	6	550.26	10.3	1	1536.47
12/31/17	2	542.81	122.87	304.29	6	551.94	7.58	1	1538.49

As can be seen the number of DJJ, MDSO, PC2684, and SVP patients were too few to allow conclusions to be drawn about violence trends, and so will not be presented.

Rates of Violence at DSH-Patton

Yearly Rates

Figure III.67
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Patton

Table III.57
DSH-Patton Yearly A2 Patient-on-patient assault Summary

YEAR	A2 PATIENT-ON-PATIENT ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	1190	574959	2.07	NA
2011	882	564601	1.562	-24.5
2012	815	571765	1.425	-8.8
2013	751	570062	1.317	-7.6
2014	723	567459	1.274	-3.3
2015	775	566620	1.368	7.4
2016	686	571873	1.2	-12.3
2017	609	564779	1.078	-10.2

Table III.58
DSH-Patton Yearly A4 Patient-on-staff assault Summary

YEAR	A4 PATIENT-ON-STAFF ASSAULTS	TOTAL PATIENT DAYS	RATE PER 1000 DAYS	CHANGE FROM PREVIOUS YEAR (%)
2010	588	574959	1.023	NA
2011	557	564601	0.987	-3.5
2012	531	571765	0.929	-5.9
2013	500	570062	0.877	-5.6
2014	569	567459	1.003	14.4
2015	577	566620	1.018	1.5
2016	531	571873	0.929	-8.7
2017	638	564779	1.13	21.6

Note: Increase in reported A4 assaults likely due to changes in coding that promoted greater consistency with DSH

The following chart and table provide further information into the types of staff assaults (Physical Contact-Made and Physical Contact-Attempted), which has routinely been collected since 2016.

Figure III.68
Yearly Rates of Violent Incidents, per 1000 Patient Days, at DSH-Patton

Table III.59
DSH – Patton Staff Assaults – Physical Contact Made and Contact Attempted

YEAR	PHYSICAL CONTACT	COUNT	TOTAL PATIENT DAYS	RATE	% CHANGE
2016	Contact Made	264	427041	0.618	NA
2016	Contact Attempted	261	427041	0.611	NA
2017	Contact Made	296	429536	0.689	11.5
2017	Contact Attempted	328	429536	0.764	24.9

Monthly Rates

The previous barplot showing the violence rates as an overall yearly average does not show the monthly variability in the rates that occurs regularly. Two figures are shown, the first being a plot of the violence rates on a monthly basis, and the second showing the violence rates for each month averaged over the six months before and after each month, to create a “smoothed” plot (much like you would see in a financial article, where daily results are “smoothed” to better discern trends over time).

Figure III.69
DSH-Patton Monthly Rates of Violence per 1000 Patient Days

Trend of Monthly Rates

Figure III.70
DSH-Patton Trends of Monthly Rates of Violence per 1000 Patient Days

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Figure III.70 shows the trend of the monthly violence rates (patient-on-patient assault, patient-on-staff assault, and total patient-on-patient and patient-on-staff assault) for DSH-Patton. The dashed lines indicate the previous years (2010-2016) average rate for each category, for comparison with 2017.

Table III.61 provides a yearly summary of the year-over-year changes in the assault rates.

It should be noted that while a trend may be seen overall, it does not mean that the trend was seen uniformly across all legal classes or hospitals.

The table below notes, comparing 2017 to 2016, whether an increase or decrease was seen in violence (patient or staff) at DSH-Patton across legal classes.

Table III.60
Comparison of overall 2017 Violence Rates to 2016 Rates

LEGAL CLASS	PATIENT-ON-PATIENT VIOLENCE	PATIENT-ON-STAFF VIOLENCE
IST	Decrease	Increased
LPS	Increased	Increased
MDO	Decreased	Decreased
NGRI	Decreased	Decreased

Note: Comparisons based on average of monthly rates for that year. See following tables for each legal class.

Table III.61

Violence Rates by Major Legal Classes

DSH-Patton IST's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.71
Trends of Monthly Rates of Violence for IST's at DSH-Patton

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Figure III.72
Monthly Rates of Violence for IST's at DSH-Patton

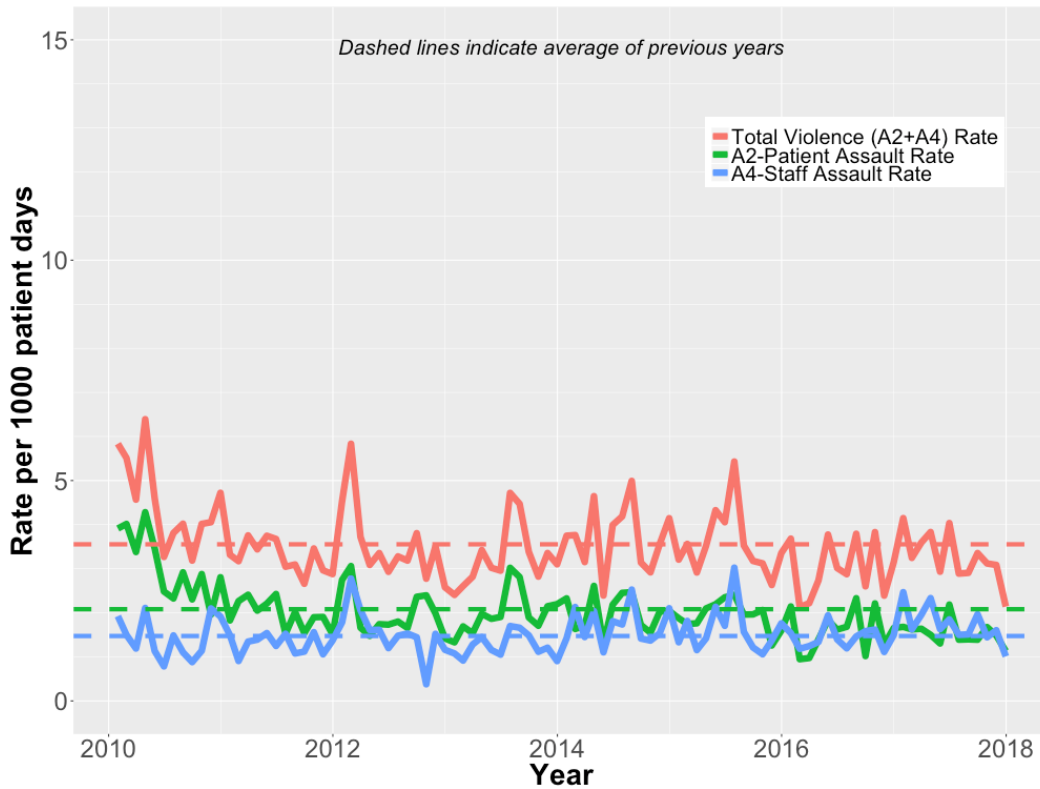

Table III.62
DSH-Patton IST Monthly Rates of Violence

DATE	A2 PATIENT-ON-PATIENT ASSAULT RATE	A4 PATIENT-ON-STAFF ASSAULT RATE	TOTAL VIOLENCE (A2+A4) RATE

DSH-Patton LPS's

Monthly Trend

The monthly trend is obtained by averaging each month with the six months before and six months after that month; this produces a “smoother” curve than the raw monthly numbers (next figure), which better enables one to detect trends in the data.

Figure III.73
Trends of Monthly Rates of Violence for LPS's at DSH-Patton

Note: For completeness (and to align with the Monthly Rate graphs, which shows data through December 31st, 2017) this graph was constructed using data through June 30th, 2018. For further information, see the appendix [Further Details of Methodology](#)

Monthly Rates Data

The information for each month's rates are given here. As can be seen, the monthly data typically produces a "saw tooth" pattern that can make it difficult to detect upward or downward trends. For this reason it is usually better to refer to the "smoothed" plot of the trends (previous figure).

Glossary of Legal Terms for Patient Commitments

OVERALL COMMITMENT/ CENSUS GROUP	LEGAL CLASS TEXT	LEGAL CODE SECTION	DESCRIPTION
PC 2684	PC2684	PC2684	Prisoner from the Department of Corrections
	PC2684A	PC2684A	Prisoner from the Department of Corrections
DJJ	DJJ	WIC 1756	Youth Authority Certification/Youth Authority Referral through Regional Office
PC 1370 IST	IST PC1370	PC1370 or Title 18 USC 4244	Incompetent to Stand Trial
IST (other)	MIST	PC 1370.01	Misdemeanant Incompetent to Stand Trial
	EIST	PC 1372(e)	Restored (IST) on Court Hold
	ROIST RO1370	PC 1610	Temporary Admission while waiting for Court Revocation of a PC 1370 (IST)
	DDIST	PC1370.1	Commitment as Incompetent to Stand Trial because of Developmental Disability (up to 6 months) and Mental Disorder
LPS	T.Cons	WIC 5353	Temporary Conservatorship
	CONS	WIC 5358	Conservatorship
	VOL	WIC 6000	Voluntary
	DET	WIC 5150	72-Hour Detention
	CERT	WIC 5250	14-Day Certification
	SUIC	WIC 5260	Additional 14-Day Certification
	POST	WIC 5304(a)	180-Day Post Certification – ONLY (until 6/91 used for pending cases also, see 37)
	ADD	WIC 5304(b)	Additional 180-Day Post Certification
	PC2974	PC 2974	Recommitment After Expiration of Prison Term (Must have concurrent W&I commitment)
	A-CERT	WIC 5270.15	30-Day Certification
PCD	WIC 5303	Pending Court Decision on 180-Day Post Certification	

OVERALL COMMITMENT/ CENSUS GROUP	LEGAL CLASS TEXT	LEGAL CODE SECTION	DESCRIPTION
	MURCON	WIC 5008(h)(1)(B)	Murphy's Conservatorship
	DMR	WIC 6500, 6509	Dangerous Mentally Retarded Committed by Court
	CAMR	WIC 4825, 6000(a)	Voluntary Adult Mentally Retarded Committed by Court
	VJCW	WIC 6552	Voluntary Juvenile Court Ward
	DMRH	WIC 6506	Hold Pending Hearing on W&I 6509 Petition
MDO (PC 2962/2964a)	MDO PC2962	PC 2962	Parolee Referred from the Department of Corrections
	PC2964a	PC 2964(a)	Parolee Rehospitalized from Conrep after DMH hearing
MDO (PC 2972)	PC2972	PC 2972	Former Parolee Referred from Superior Court
	RO2972	PC 1610	Temporary Admission while waiting for Court Revocation of PC 2972
MDSO	MDSO	WIC 6316	Mentally Disordered Sex Offender – Observation
	MDSOI	WIC 6316	1. MDSOI Observation Indeterminate; 2. MDSO Return by Court
	ROMDSO	PC 1610	Temporary Admission while waiting for Court Revocation of MDSO
NGRI (PC1026)	NGI PC1026	PC 1026	Not Guilty by Reason of Insanity
NGRI (OTHER)	RONGI RO 1026	PC 1610	Temporary Admission while waiting for Court Revocation of a PC 1026 (NGI)
NGRI (Other)	MNGI	WIC 702.3	Minor Not Guilty by Reason of Insanity
SVP (W&I 6604)	SVP	WIC 6604	Sexually Violent Predator
SVP (W&I 6602)	SVPP	WIC 6602	Sexually Violent Predator Probably Cause
SVP (OTHER)	SVPH	WIC 6601.3	Sexually Violent Predator BPT Hold
	SVPE	WIC 6600	Sexually Violent Predator Court Hold

Brief Description of General Methodology

- Data for violent incidents from January 1, 2010 through December 31, 2017 was provided by the Data Management Office (DMO), and incidents using the Subcategory Codes for A2 (“Patient Assault”) or A4 (“Staff Assault”) were identified.
- From this file, all incidents coded with A2 (“Patient Assault”) were identified separated out into a new file;
 - Incidents were then arranged in order by Date and Incident Number and given a serial number.
 - This file was then “de-duplicated,” (i.e., first occurrences of an incident number/serial number were kept, and entries with duplicated incident number/serial number were removed).
 - This “de-duplication” procedure then yielded a file with unique incidents and incident numbers; these were then counted to arrive at the number of unique incidents for a given year
- The same methodology was then used to identify all incidents coded with A4 (“Staff Assault”), i.e., DSH returned to the original file with all incidents and separated out those coded as A4 (“Staff Assault”), arranged these in order by Date and Incident Number, created a serial number, and then de-duplicated the entries in this file to arrive at a count of unique staff assaults.
- This process yielded the count of incidents. To determine the rates, the number of incidents in a given time period was then divided by the Average Daily Census (ADC) for that same time period (determined by data provided by the DMO). This yielded a rate measure of “incidents per patient day;” this was then multiplied by 1000 to produce the rate measure per 1000 patient days.
- This methodology was chosen because a single incident could include both a patient assault and a staff assault. Deduplicating a file containing both incident codes (without separating these out ahead of time) would keep one incident type, but not both. Separating out by codes first and then removing duplicate entries was seen as the preferred method to retain the maximum information possible and not preferentially highlight or ignore patient assaults over staff assaults, or vice versa.
- The same method was used to identify A2 and A4 incidents for each hospital, but first the data file was reduced to include just incidents from the hospital being analyzed. Additionally, the Average Daily Census data pertaining to that hospital was used to determine the total patient days for that hospital, in order to determine the rates of violence.

Further Details of Methodology

Data such as the violence data presented in this report are ordered by date, or time. A collection of data points organized in chronological order is considered to be a “time series.” When time series data oscillates (such as the violence data and stock market data), it is common to estimate a trend for the data. There are various ways to estimate the trend at particular times, but a relatively simple procedure that does not make any assumptions about the underlying distribution of the time series is to calculate a moving average for each month centered on that month.

A moving average is an average of a specified number of time series values around each value in the time series. In this context, the length of the moving average, 12 months, was chosen to average out any seasonal effects in the time series. However, in order to average 12 consecutive months before and after a point, we have to be careful.

Suppose our time series begins at January ($t = 1$) and we average January up to December ($t = 12$). This average corresponds to a time $t = 6.5$, between June and July. When we come to estimate seasonal effects, we need a moving average at integer times. This can be achieved by averaging the average of January up to December and the average of February ($t = 2$) up to January ($t = 13$). This average of two moving averages corresponds to $t = 7$, and the process is called centering. Thus the trend at time t can be estimated by the centered moving average

$$x_1 = \frac{\frac{1}{2}x_{t-6} + x_{t-5} + x_{t-4} + x_{t-3} + x_{t-2} + x_{t-1} + x_1 + x_{t+1} + x_{t+2} + x_{t+3} + x_{t+4} + x_{t+5} + \frac{1}{2}x_{t+6}}{12}$$

In the equation above, for month 1, we would go back and take one-half the value six months prior, then take the full value five months prior, etc., summing all the way through to the full value five months after month 1, and then half the value at six months after month 1. The coefficients for each month are $1/12$ (or sum to $1/12$ in the case of the first and last coefficients), so that equal weight is given to each month and the coefficients sum to 1.

This also describes the reason why DSH has to use data that runs six months ahead of the monthly data when DSH wants to present data in trend graphs that end on the same date.
