Each FNAT shall have a supervising psychologist, who shall assign an ETP case or group of cases to each FNAT psychologist.
- (e) “Individualized Treatment Interventions,” as used in this chapter, means interventions provided to a patient to address patient-specific risk factors for highest risk of violence.

- (i) “Standardized Violence Risk Assessment Methodologies,” as used in this chapter, are reliable and valid methods used in violence risk assessment, which may include but are not limited to, an analysis of the severity, frequency, and intensity of a patient’s past violent behavior, and an evaluation of the static and dynamic violence risk factors.
- (j) “Treatment Team,” as used in this chapter, is a group of ETP treatment providers assigned to an ETP patient and generally includes a primary psychiatrist, a psychologist, a clinical social worker, a rehabilitation therapist, a registered nurse, and a psychiatric technician.
- (k) “Patient at High Risk of Most Dangerous Behavior,” as used in this chapter, means a patient has a history of physical violence and currently poses a demonstrated danger of inflicting substantial physical harm upon others in an inpatient setting, as determined by an in-depth Standardized Violence Risk Assessment conducted by the Department.
